

WHAT'S A LANDFORM?

A landform is a natural feature on Earth's surface. There are many different types of landforms. A mountain is a very tall landform, and its peak is the highest point at the top. A hill is like a small mountain, but not as steep. A steep type of landform is a cliff. A cliff is a rock face that is very tall and almost straight up and down. All these landforms are made by changes on Earth that happen slowly over time. Can you think of any other landforms?

1. What is a landform?

2. What is a peak of a mountain?

Name one type of landform from the passage.
